

Thermo Scientific Model 410i Carbon Dioxide Analyzer

Utilizing non-dispersive infrared technology

The Thermo Scientific™ Model 410i Carbon Dioxide (CO₂) Analyzer utilizes advanced Non-Dispersive Infrared (NDIR) optical filter technology to measure the concentration of CO₂ in stack gas levels. Reporting capabilities are user-selectable for either of the accepted industry standards, straight extractive or dilution sampling methods.

- Advanced Non-Dispersive Infrared (NDIR) technology
- User-selectable reporting capabilities
- Expanded ambient temperature operating range
- High performance over a wider range of concentrations
- Linearity through all ranges

This analyzer utilizes advanced Non-Dispersive Infrared technology (NDIR) with optically fixed bandpass interference filters and quantum detection to analyze the concentration of CO₂ in the gas stream.

In addition, the expanded ambient temperature operating range provides excellent performance over a wider range of concentrations.

The Thermo Scientific Model 410i analyzer is available in Standard or High Level ranges and uses an internally stored calibration curve to accurately linearize the instrument output over any range up to a concentration of either 10,000 ppm (Standard) or 25% (High level).

The Model 410i analyzer combines proven detection, easy to use menu-driven software, and advanced diagnostics to offer unsurpassed flexibility and reliability.

iSeries features also include:

- Rack mountability
- Ethernet port & connectivity options
- Flash memory for increased data storage
- Easily programmable short-cut keys
- Large interface screen
