

# Thermo Scientific Model 49i Ozone Analyzer

UV photometric gas analyzer

The Thermo Scientific™ Model 49i Ozone Analyzer utilizes UV Photometric technology to measure the amount of ozone in the air from ppb levels up to 200ppm.

- Approved to meet the following standards: U.S. EPA , UK Environmental Agency and the European Union
- Ethernet connectivity for efficient remote access
- Enhanced user interface with one button programming and large display screen
- Flash memory for increased data storage and user downloadable software
- Enhanced electronics design optimizes product commonality

The Thermo Scientific Model 49i analyzer is a dual cell photometer, the concept adopted by the NIST for the national ozone standard.

Dual range and auto range are standard features of the Model 49i analyzer. Because the instrument has both sample and reference flowing at the same time, a response time of 20 seconds can be achieved.

Temperature and pressure correction are standard offerings. User settable alarm levels for concentration and for a wide variety of internal diagnostics are available from an easy to follow menu.

This state-of-the-art gas analyzer offers features such as an Ethernet port and flash memory for increased data storage and field upgradability.

Ethernet connectivity provides efficient remote access, allowing the user to download measurement information directly from the instrument without having to be on-site.

You can easily program short-cut keys to allow you to jump directly to frequently accessed functions, menus or screens. The large interface screen can display measurement information and status, while viewing menu and operational screens.
